Record **designerzen@gmail.com** as the email to be included with my response

Untitled Title

Section 1: Your Team *

List everyone involved with their full name and provide any information that you'd like to share. If it's just you, your full name.

zen olenski

1. Team Name
Got a name in mind? Put it here.

awesomething

2. Contact Email (We'll use this to notify you about results and next steps.) You may enter multiple emails separated by commas. *

designerzen@gmail.com

3. Audiotool Username(s) (List all team members' Audiotool usernames, comma-separated. E.g. kayra, beatmaker99) *

designerzen

3.1. Discord Usernames (so we can engage with you on our Discord)

designerzen

4. Team Size

- (●) Solo (just me)
- ( ) 2 people
- ( ) 3 people
- ( ) 4+ people

Clear selection

5. Where are you building from? (This helps us track participation across the series. It doesn't affect judging.) Location and/or institution.

London, UK

Section 2: Your App
Summarize your app's features as clearly and concisely as possible, like an elevator pitch for the judges.

Collaborative, accessible live-jamming with yo

7. Challenge Category (Select all that apply)

- [x] CH-01 · Ideation & Discovery
- [x] CH-02 · Composition & Theory
- [ ] CH-03 · Music Games & Interactive Experiences
- [x] CH-04 · Sound Design & Synthesis
- [x] CH-05 · Connect & Integrate
- [ ] CH-06 · Distribution & Marketing

8. What does your app do? *

List all features of your app as bullet points.

- Synched tempo across devices and sessions
- Records all inputted notes and musical events
- Brings together various Input methods including :
    - MIDI
    - gamepads
    - qwerty keyboards
    - accelerometer
    - microphone input from dominant frequency for root note
    - DVS from Vinyl for timing
    - Magic Mouse
    - Mackie Transport Protocol
- Signal Transformers that convert or augment an input such as :
    - Chord creator from specified root / specified mood
    - Regiment key, scale or tuning inc EDO
    - Transpose Inputted notes into the shared key / tuning
    - Arpeggio from chords / root
    - Augment, diminish and alter intervals
    - Delay, retime, repeat, echo
    - Retune, filter, shift, transpose, randomise...
    - Quantisation of notes so that everything remains in time
- Offer configurable accessible outputs including :
    - MIDI
    - Sheet music with notation
    - Narrate notes with speech synthesis to read out note names and info
    - Vibrate device on note
    - Export to file such as midi, dawproject
    - Built in sound sources (one day will hopefully be able to use the AudioTool SoundFont)
- Send your project directly to AudioTool with a single login, multiple people can submit which creates layers in the track

9. Live App URL (Must be a working, hosted URL. Local builds won't be accepted. Use Vercel, Netlify, GitHub Pages, or similar.) *

https://designerzen.github.io/harmoneasy/

10. Optional | Video Demo Link (Max. 3 minutes. Loom, YouTube (unlisted), or Vimeo. Show the app working inside an Audiotool session.)

Your answer

11. GitHub / Source Repository (Optional - Public repo preferred. Private repos won't be reviewed by judges.)

https://github.com/designerzen/harmoneasy

Section 3: Technology & Architecture

WebAudio, OPFS, MessagePack, (Web)MIDI, W

12. Which parts of the Nexus SDK did you use? (Optional) *

- [x] Read/Write Project Data
- [ ] Multiplayer / Real-time Sync
- [x] MIDI Integration
- [ ] Audio Integration
- [ ] Protobufs / Native App
- [ ] Other:

Upload Icon as svg

Upload an app icon as a square SVG file.

No design experience? Ask your LLM like ChatGPT or Claude to make one for you.

Note: a Google account is required to upload files.

Upload 1 supported file. Max 10 MB.

harmoneasy.svg

13. Anything else the judges should know? (Optional - Known bugs, special setup steps, or context that helps judges evaluate fairly.)

I made this to allow my public music sessions to be as inclusive and fun as possible - hence the name HarmonEASY! It will make more sense when you connect multiple inputs such as gamepads / midi keyboards and sync devices running this software together as then you can have many people playing together (even remotely) but it bring all pieces into one track in AudioTool;.

This also allows our band to jam wherever we are with whatever input devices we have to hand, and allows my music sessions with disabled kids with all sorts of abilities to have fun and make music together and it still sounds great! =D

I agree to the Audiotool Terms of Service and confirm that this app was built during the Let's Build! Hackathon Series 2026 between 28 May - 6 July 2026. I understand that submitted apps may be featured in Audiotool's showcase, social channels, and press materials. I (or my team) own the IP and we keep all rights. *

- (●) yes

I agree that my app and (team) name may be shared with Audiotool's hackathon partners for promotional purposes. *

- (●) yes
- ( ) no

Send me a copy of my responses.
